

# Session Tokens using Express session

## **Decision:**

The express session is used to create and manage session middleware.

## **Status:**

Approved

## **Context:**

The express session assigns a token to a client when the client logs in which will keep the client logged into the app. It will prevent a client from entering any of the app pages if the client has not logged in as they would not have a token yet.

## **Consequence:**

A client won't be able to enter random rooms and will be able to remain in the app during use. The client's token will be removed when the client leaves the app.
