

# Data Encryption : Bcrypt

## **Decision:**

Bcrypt is to be implemented to hash passwords of the client user's login details. It also keeps the server secure.

## **Status:**

Approved

## **Context:**

It is favorable to protect the client user's password for their login details to avoid security threats. Bcrypt is user friendly and thus favorable to implement.

## **Consequence:**

Clients' user passwords are hashed and the web browser is secure.
