SQL Database hosted by Azure

Decision:

An SQL database is implemented to store account details and game data for the OH MY WORDLE! application.

Status:

Approved

Context:

Azure is commonly used as a platform for hosting databases in the cloud. This allows for a synchronous connection to a database to create an OH MY WORDLE! application experience.

Consequence:

A sign-up system is created and stored which allows the client to log in with their details. Their account details will then be linked with their user history and thus can view it on a scoreboard against other client users.
